LENGTHS

A COMPARING LENGTHS

Method **Line Up to Compare Lengths**

To compare the length of two objects, line them up side by side. The object that looks taller is the longer one.

Ex:

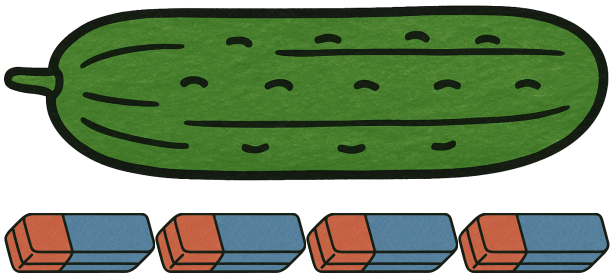
The girl is taller than the boy.

B MEASURING LENGTHS

Method **Measure Length with Objects**

To measure the length of an object, use small things like blocks or erasers. Line them up next to the object and count how many fit along its length.

Ex:



The cucumber measures 4 erasers long.
